

AI Usage DISCLOSURE FORM

1. Team Details

Team Name: WeaveClaw

Project / Product Name: WeaveClaw

Organization / Institution (if any): R.V. College Of Engineering

Submission Date: 08/05/2026

2. AI Usage Declaration

Did your team use any Artificial Intelligence (AI) in developing this project? Yes / No

Yes

3. Purpose of AI Usage (Brief Details)

Idea generation / brainstorming: Brainstorming automation use cases that cater to Samsung consumers (Safe Journey, Trip Planner, GitHub Watcher), defining the skill ecosystem architecture, and identifying gaps between OpenClaw's raw capabilities and user accessibility

Code generation or assistance: Refining backend NLP pipeline code (rule_classifier.js, skill_builder.js), shell scripts (phone_control.sh, phone_agent.sh, routine_runner.sh) and SQLite schema design.

UI / UX design: -

Content creation: Generation of summaries to assist creativity while making presentation slides.

Data analysis: —

Testing / debugging: Generating Jest + Supertest test suites for the backend API (7 test suites), debugging ADB shell command failures

Other: -

4. Feature Origin Classification

1. Feature Name: Automation Use case example ideation

Self-Generated/AI-Generated/Both: Both

Description:

AI tool used: Claude Sonnet 4.6

Prompt used:

You are designing advanced AI-powered mobile automation workflows using a phone emulator and an LLM (like Gemini).

I want you to generate a list of 10 COMPLEX, high-value automation use cases.

Requirements:

- Each use case must involve MULTI-STEP reasoning (not just opening apps)
- Must combine actions across multiple apps (e.g., Gmail, browser, notes, messaging, etc.)
- Must include at least one step of AI understanding or generation (summarization, decision-making, transformation, etc.)
- Should feel like something a real user would actually use in daily life or work
- Should demonstrate intelligence (analyzing, prioritizing, generating, comparing — not just executing commands)
- Avoid hardware-based automation (no IoT, no smart home devices)
- Avoid trivial flows like “open app and play music”

For each use case, provide:

- Name of the workflow
- Example natural language trigger (what the user says)
- Step-by-step execution (5–8 steps)
- Why this use case is valuable / what intelligence it demonstrates

Focus especially on domains like:

- Developer workflows- github
- Productivity / knowledge work
- Communication (email, messaging)
- Research and content generation
- Personal organization

Output summary:

5. Ethical & Compliance Confirmation

AI usage complies with guidelines and policies. **Yes**

No proprietary or copyrighted data misused. **I Agree**

6. Declaration & Sign-Off

Name of Team Representative: B. Amisha Pai

Role: Team Leader

Signature: B. Amisha Pai
